### ***DIGITAL THEATER PROJECTION VERTICAL LIFT SYSTEM***

### ***THE NEW GENERATION OF THEATER PROJECTION***

## Digital Theater Projection Vertical Lift System

All new and retro-fit theaters will save tens of thousands of dollars by using our Digital Theater Projection Vertical Lift System instead of a projection room. Second story theaters are a thing of the past! Boothless technology is the new concept. Our system has been designed using state-of-the-art CAD software providing the most current design concepts available.

- Precision placement with smooth, silent motion for total repeat location of the projection equipment
- Lead screw technology for positive security providing self-braking safety in any position.
- Moving mechanisms are protected and hidden from sight using a telescoping metal enclosure.
- Receiving cabinet, modular in design, allowing for ease of installation on any size/type of projector (except IMAX equipment.).
- Removable panels allow for maintenance of equipment including bulb replacement, filter cleaning/replacement, and glass cleaning.
- Designed to maintain an exterior noise level of 60db or less
- Fractional horsepower AC motor 120v 15A or less
- Lifetime zero maintenance of moving mechanism
- System includes a one year manufacturer's warranty
- Manufactured in the USA
